The School Butterfly Box

The class watched a butterfly develop. At first, tiny eggs rested on a leaf. Caterpillars hatched and ate plant material. Later, each caterpillar formed a chrysalis. Finally, an adult butterfly emerged. Students recorded dates and made drawings instead of touching the animals. One student wrote that a butterfly is simply a small bird. The teacher asked the class to check its evidence. Their notes showed an insect with six legs, not a bird with two. Careful records helped them correct the mistake. Watching one animal did not tell them everything about every butterfly, but it gave them a useful beginning.

1. Using the supplied passage, write one organized paragraph explaining its central message. Include two accurate details and explain how they support your response. (5 points)

Answer / scoring: 5-point rubric: accurate central message (1), two relevant text details (2), logical explanation/organization (1), clear sentences/conventions (1). Accept supported interpretations.

2. Revise two sentences from your response. Explain one change that improves grammar, word choice, or clarity. (3 points)

Answer / scoring: 3-point rubric: two effective revisions (2); accurate explanation of one improvement (1).

Science - 10 points

W3 data: A fictional class compares pulse counts at rest and after activity. Trial A: 73 pulse counts in one minute; Trial B: 103 pulse counts in one minute. These are invented assessment data, not a claim about a real investigation.

1. What are common stages in a flowering plant life cycle? (1 point)

Answer / scoring: Seed, germination, growth, flowering, and new seed production.

2. How does a butterfly life cycle differ from simple growth in size? (1 point)

Answer / scoring: It includes distinct stages: egg, larva, pupa, and adult.

3. Use W3 data. Which trial has the higher recorded value, and by how much? (2 points)

Answer / scoring: Trial B; 30 pulse counts in one minute.

4. Use W3 data. State one observation without claiming its cause. (1 point)

Answer / scoring: Trial B recorded 103 versus 73 in A; accept an accurate description without an unsupported causal claim.

5. Use W3 data. Does this two-value table alone prove which factor caused the difference? Explain. (2 points)

Answer / scoring: No. Need a clear tested variable, controls, repeated trials, and consideration of other causes. One point for no; one for a relevant reason.

6. Draw and compare a flowering plant and butterfly life cycle. (3 points)

Answer / scoring: Rubric (3): scientifically accurate parts/ideas (1); correct relationships/reasoning (1); clear labels/evidence or method (1). Correct labeled stages and one similarity/difference; arrows show the cycle.
