Keeping Water Cool

Two students investigated how to keep a cup of water cool. They used identical cups, the same amount of water, and the same starting temperature. One cup was wrapped in cloth; the other was left uncovered. After twenty minutes in the same room, they measured both temperatures. They wrote the results in a table. They did not call one measurement proof that cloth is always the best material. Instead, they proposed trying another material and repeating the test. Their report explained the question, method, observations, and limits of their conclusion. A clear report lets another reader understand what was tested and what still needs investigation.

1. Using the supplied passage, write one organized paragraph explaining its central message. Include two accurate details and explain how they support your response. (5 points)

Answer / scoring: 5-point rubric: accurate central message (1), two relevant text details (2), logical explanation/organization (1), clear sentences/conventions (1). Accept supported interpretations.

2. Revise two sentences from your response. Explain one change that improves grammar, word choice, or clarity. (3 points)

Answer / scoring: 3-point rubric: two effective revisions (2); accurate explanation of one improvement (1).

Science - 10 points

W3 data: A fictional comparison records temperature before and after a controlled warming step. Trial A: 23 temperature in degrees C; Trial B: 31 temperature in degrees C. These are invented assessment data, not a claim about a real investigation.

1. What does energy transformation mean? (1 point)

Answer / scoring: Energy changes form within a system.

2. Why does a working device often become warm? (1 point)

Answer / scoring: Some energy is transferred as thermal energy.

3. Use W3 data. Which trial has the higher recorded value, and by how much? (2 points)

Answer / scoring: Trial B; 8 temperature in degrees C.

4. Use W3 data. State one observation without claiming its cause. (1 point)

Answer / scoring: Trial B recorded 31 versus 23 in A; accept an accurate description without an unsupported causal claim.

5. Use W3 data. Does this two-value table alone prove which factor caused the difference? Explain. (2 points)

Answer / scoring: No. Need a clear tested variable, controls, repeated trials, and consideration of other causes. One point for no; one for a relevant reason.

6. Draw an energy-chain model for a fan or lamp. (3 points)

Answer / scoring: Rubric (3): scientifically accurate parts/ideas (1); correct relationships/reasoning (1); clear labels/evidence or method (1). Correct initial energy source, intermediate electrical energy, and motion/light plus thermal output.
