Should the School Reduce Plastic?

The student council proposed replacing some single-use lunch packaging with reusable containers. Its argument began with a clear claim: the school should run a four-week trial before making a permanent purchase. The council's fictional classroom survey found that 72 of 120 respondents supported the trial. A second source, a cafeteria cost table, estimated that washing reusable containers would require additional time. Supporters argued that the trial could measure both waste and labor instead of assuming that one benefit settled the whole question. Critics worried about lost containers and unequal access to supplies. The proposal responded by lending containers during the trial and counting losses. The council did not claim that a survey proved the policy would work. It used the survey to show interest and proposed collecting direct evidence of costs and waste.

Answer / scoring: It transfers stored carbon to the atmosphere as carbon dioxide.

2. Why can excess nutrient runoff affect an ecosystem? (1 point)

Answer / scoring: It can alter growth and water conditions, including oxygen availability.

3. Use W1 data. Which trial has the higher recorded value, and by how much? (2 points)

Answer / scoring: Trial B; 6 distinct species observed.

4. Use W1 data. State one observation without claiming its cause. (1 point)

Answer / scoring: Trial B recorded 15 versus 9 in A; accept an accurate description without an unsupported causal claim.

5. Use W1 data. Does this two-value table alone prove which factor caused the difference? Explain. (2 points)
