Should the School Reduce Plastic?

The student council proposed replacing some single-use lunch packaging with reusable containers. Its argument began with a clear claim: the school should run a four-week trial before making a permanent purchase. The council's fictional classroom survey found that 72 of 120 respondents supported the trial. A second source, a cafeteria cost table, estimated that washing reusable containers would require additional time. Supporters argued that the trial could measure both waste and labor instead of assuming that one benefit settled the whole question. Critics worried about lost containers and unequal access to supplies. The proposal responded by lending containers during the trial and counting losses. The council did not claim that a survey proved the policy would work. It used the survey to show interest and proposed collecting direct evidence of costs and waste.

1. Using the supplied passage, write two organized paragraphs explaining its central message. Include two accurate details and explain how they support your response. (5 points)

2. Revise two sentences from your response. Explain one change that improves grammar, word choice, or clarity. (3 points)

W1 data: A fictional survey uses the same area and observation time in two habitats. Trial A: 9 distinct species observed; Trial B: 15 distinct species observed. These are invented assessment data, not a claim about a real investigation.

1. How can burning fossil fuels affect carbon cycling? (1 point)

2. Why can excess nutrient runoff affect an ecosystem? (1 point)

3. Use W1 data. Which trial has the higher recorded value, and by how much? (2 points)

4. Use W1 data. State one observation without claiming its cause. (1 point)

5. Use W1 data. Does this two-value table alone prove which factor caused the difference? Explain. (2 points)

6. Model one human impact on a cycle. (3 points)
