The Printer's Workshop

Original drama:
[An apprentice arranges metal type on a table.]
APPRENTICE: If we print the same page many times, will every reader agree with it?
PRINTER: Copies spread words, not agreement.
APPRENTICE: Then accuracy matters before the first copy.
[The printer points to a misplaced letter.]
PRINTER: And readers must question what they read.

Informational companion: In early modern Europe, printing made it possible to reproduce texts more quickly than copying each one by hand. Printed works helped ideas circulate, including religious, scientific, and artistic arguments. Access remained uneven; not everyone could read or obtain books. Greater circulation did not guarantee that every claim was true. Scholars therefore needed observation, reasoning, and the comparison of sources as well as access to texts.

1. Using the supplied passage, write two organized paragraphs explaining its central message. Include two accurate details and explain how they support your response. (5 points)

Answer / scoring: 5-point rubric: accurate central message (1), two relevant text details (2), logical explanation/organization (1), clear sentences/conventions (1). Accept supported interpretations.

2. Revise two sentences from your response. Explain one change that improves grammar, word choice, or clarity. (3 points)

Answer / scoring: 3-point rubric: two effective revisions (2); accurate explanation of one improvement (1).

Science - 10 points

Score: _____ / 10

W3 data: A fictional class compares water collection in two labeled trials using the same time interval. Trial A: 13 milliliters of water collected; Trial B: 21 milliliters of water collected. These are invented assessment data, not a claim about a real investigation.

1. How do criteria and constraints differ in engineering? (1 point)

Answer / scoring: Criteria are desired outcomes; constraints are limits on designs.

2. Why use test results to revise a prototype? (1 point)

Answer / scoring: Evidence shows how well it meets criteria within constraints.

3. Use W3 data. Which trial has the higher recorded value, and by how much? (2 points)

Answer / scoring: Trial B; 8 milliliters of water collected.

4. Use W3 data. State one observation without claiming its cause. (1 point)

Answer / scoring: Trial B recorded 21 versus 13 in A; accept an accurate description without an unsupported causal claim.

5. Use W3 data. Does this two-value table alone prove which factor caused the difference? Explain. (2 points)

Answer / scoring: No. Need a clear tested variable, controls, repeated trials, and consideration of other causes. One point for no; one for a relevant reason.

6. Develop an engineering comparison. (3 points)

Answer / scoring: Rubric (3): scientifically accurate parts/ideas (1); correct relationships/reasoning (1); clear labels/evidence or method (1). Goal, constraints, two designs, measurement, and an evidence-based improvement.
