The Sparrow and the Lantern

This is an original fable. A sparrow bragged that she could light the whole forest with one lantern. An owl asked her to test the lantern before promising too much. The sparrow refused. At dusk she lifted the lantern, but its light reached only the nearest branch. Embarrassed, she almost flew away. Then she invited the fireflies to help. Together they marked a safe path to the clearing. The sparrow thanked each helper and promised to listen before boasting again. The owl did not laugh at her mistake; he praised the useful path.

1. State a central idea or theme of the passage. (1 point)

Answer / scoring: Listening and cooperation are more useful than boasting.

2. Give a detail that supports that idea. (1 point)

Answer / scoring: She asks the fireflies for help, thanks them, and promises to listen.

3. Explain how a second detail adds to the idea. (1 point)

Answer / scoring: He praises it instead of laughing at the sparrow's mistake.; explain a logical connection.

4. Explain how the ending or final statement develops the passage's message. (2 points)

Answer / scoring: Listening and cooperation are more useful than boasting.; include a relevant final detail and a logical explanation.

5. What shows that the sparrow changes? (1 point)

Answer / scoring: She asks the fireflies for help, thanks them, and promises to listen.

6. How does the owl respond to the finished path? (1 point)

Answer / scoring: He praises it instead of laughing at the sparrow's mistake.

Answer / scoring: Rubric: clear relevant main idea/claim (1); two accurate supporting details (1 each); reasoning/organization (1); readable complete sentences and conventions (1). Accept defensible interpretations, not just the sample central idea: Listening and cooperation are more useful than boasting.

Science - 10 points

W3 data: A fictional comparison records temperature before and after a controlled warming step. Trial A: 23 temperature in degrees C; Trial B: 31 temperature in degrees C. These are invented assessment data, not a claim about a real investigation.

1. What is reflection? (1 point)

Answer / scoring: Light bouncing from a surface.

2. What is refraction? (1 point)

Answer / scoring: A change in light's direction as it passes between materials where its speed differs.

3. Use W3 data. Which trial has the higher recorded value, and by how much? (2 points)

Answer / scoring: Trial B; 8 temperature in degrees C.

4. Use W3 data. State one observation without claiming its cause. (1 point)

Answer / scoring: Trial B recorded 31 versus 23 in A; accept an accurate description without an unsupported causal claim.

5. Use W3 data. Does this two-value table alone prove which factor caused the difference? Explain. (2 points)

Answer / scoring: No. Need a clear tested variable, controls, repeated trials, and consideration of other causes. One point for no; one for a relevant reason.

6. Draw reflection and refraction as different paths. (3 points)

Answer / scoring: Rubric (3): scientifically accurate parts/ideas (1); correct relationships/reasoning (1); clear labels/evidence or method (1). Reflection returns from surface; refraction crosses a boundary and changes direction.

Sample cue: ¿Dónde está la biblioteca? Accept different accurate answers and appropriate gender/person forms. Minor accent/pronunciation errors do not erase understood meaning.
