Keeping Water Cool

Two students investigated how to keep a cup of water cool. They used identical cups, the same amount of water, and the same starting temperature. One cup was wrapped in cloth; the other was left uncovered. After twenty minutes in the same room, they measured both temperatures. They wrote the results in a table. They did not call one measurement proof that cloth is always the best material. Instead, they proposed trying another material and repeating the test. Their report explained the question, method, observations, and limits of their conclusion. A clear report lets another reader understand what was tested and what still needs investigation.

1. Paraphrase one important sentence without copying it. (1 point)

Answer / scoring: Accurate meaning in substantially new wording.

2. How does a summary differ from a detailed retelling? (1 point)

4. Write a two-sentence summary of the passage. (2 points)

Answer / scoring: A clear investigation report describes methods, evidence, and limits. plus an accurate supporting idea; no invented details.

5. Name two things kept the same in the investigation. (1 point)

Answer / scoring: Any two: cup type, water amount, starting temperature, room, measurement interval.

6. Why do the students propose repeating the test? (1 point)

Answer / scoring: One measurement is limited evidence; repeating can check the result.

7. Correct this misspelling: enviroment. (1 point)

Answer / scoring: environment

8. Write one organized paragraph (4-6 sentences) explaining an important idea from the supplied passage. Paraphrase two relevant details and credit the supplied passage as your source. (5 points)
