A Pond Study

A class studied a small pond near its school. Students recorded water temperature, counted visible organisms from the bank, and drew a model of a food web. Because the first visit happened after rain, they wondered whether that single visit represented typical conditions. They returned at the same time of day during three later weeks. Their records were not identical. One student wanted to erase the unusual measurements, but her partner argued that differences could be useful evidence. The group kept the records and described the limits of its method: it had observed only one pond and had not counted organisms beneath the water. Their report distinguished observations from explanations. "We saw fewer insects" was an observation; "the cooler temperature caused the change" was a hypothesis that needed further testing. The study taught the class that careful questions are as important as confident conclusions.

1. Write a defensible claim about the passage. (1 point)

2. Quote or paraphrase one supporting detail. (1 point)

3. Explain why unsupported opinion is weaker than evidence. (1 point)

4. Support your claim with two details and reasoning. (2 points)

5. Why is the statement about cooler temperature a hypothesis rather than an observation? (1 point)

6. Give two limits of the study. (1 point)

7. Correct this misspelling: libary. (1 point)

8. Write two organized paragraphs (at least 8 sentences total) about the passage's main message. Use two accurate details, explain their connection, and edit sentences and spelling. (5 points)
