Grade 7 - Module 5 Week 1 Quiz - TEACHER ANSWER KEY

Scheduled: 2027-02-26 | Current-week goals + math spiral review; science/social studies alternate

Math: 7.SP.1-4 | ELA: W.7.2,7-9; RI.7.1-9 | Science: E.7.9A.1-3 | Social Studies: MS CCRS SS Grade 7 - Byzantine/Islamic civilizations | Spanish: MS World Languages Framework 2016 - Novice communication

Award points by item. Accept equivalent correct mathematical forms and supported written interpretations. For open responses, use the stated rubric; do not require identical wording. Score each subject separately, then apply your grading policy.

Math - 9 points

Score: _____ / 9

1. A survey of 50 students is used to estimate preferences of 600 students. Identify the population and sample. (1 point)

Answer / scoring: Population: all 600 students; sample: the 50 surveyed.

2. A survey asks only soccer players about the most popular school sport. Explain a likely bias. (1 point)

Answer / scoring: Soccer players are overrepresented; they may prefer soccer more than the whole school.

3. Choose a better random sample: first 20 arrivals or 20 names drawn from all student names. (1 point)

Answer / scoring: 20 names drawn from all student names.

4. In a random sample, 15 of 60 students choose art. Estimate how many of 400 students choose art. (1 point)

Answer / scoring: 100

5. Does a random sample guarantee a perfectly correct estimate? (1 point)

Answer / scoring: No; random sampling reduces selection bias but sampling variation remains.

6. Design a representative sample to ask 300 students about lunch choices. (2 points)

Answer / scoring: Use a random selection from all students or random samples across grades; avoid a convenience group. One point for random selection, one for coverage.

7. Spiral review: -5 + 15 = ? (1 point)

Answer / scoring: 10

8. Spiral review: Write 3/4 as a decimal. (1 point)

Answer / scoring: 0.75

ELA - 13 points

Score: _____ / 13

Two Sources for a Forecast

Fictional classroom sources: Source A, "Weather Log," by a student team, dated March 8, records local temperature, wind direction, and pressure at noon for five days. Source B, an unsigned advertisement dated March 8, says that one device "always predicts weather perfectly" but gives no measurements. A research group prefers Source A for describing what was actually observed. It still checks the team's instruments and method, because named authors and a date do not guarantee accuracy. The group writes a cautious forecast, separating data from inference. Its notes include each source's title, creator, date, and the particular information used. In its final explanation, it paraphrases the data instead of copying a paragraph and identifies its source. Readers can judge the explanation more easily because the evidence and its limits are visible.

1. Write a focused research question connected to the passage. (1 point)

Answer / scoring: Accept a specific, answerable question connected to the text, not an unlimited topic.

2. Name two different kinds of sources that could help answer it. (1 point)

Answer / scoring: Accept relevant books/articles, maps/data, interviews/primary accounts; each must suit the question.

3. Why should a researcher record a source's creator and title? (1 point)

Answer / scoring: To trace, check, and credit information.

4. Explain how to narrow a research topic that is too broad. (2 points)

Answer / scoring: Limit the place, time, question, or aspect; include a concrete narrower example.

5. Why is Source A a better basis for this investigation than Source B? (1 point)

Answer / scoring: A supplies dated measurements and a traceable method; B makes an unsupported absolute claim.

6. Why should researchers still check Source A's method? (1 point)

Answer / scoring: An author and date do not ensure that measurements or procedures are accurate.

7. Correct this misspelling: enviroment. (1 point)

Answer / scoring: environment

8. Write two organized paragraphs (at least 8 sentences total) explaining an important idea from the supplied passage. Paraphrase two relevant details and credit the supplied passage as your source. (5 points)

Answer / scoring: Rubric: clear relevant main idea/claim (1); two accurate supporting details (1 each); reasoning/organization (1); readable complete sentences and conventions (1). Accept defensible interpretations, not just the sample central idea: Credible research connects traceable evidence with cautious conclusions.

Science - 10 points

Score: _____ / 10

W1 data: A fictional class compares water collection in two labeled trials using the same time interval. Trial A: 11 milliliters of water collected; Trial B: 19 milliliters of water collected. These are invented assessment data, not a claim about a real investigation.

1. Why cannot one storm establish a climate trend? (1 point)

Answer / scoring: Climate requires long-term patterns, not one event.

2. How can weather observations vary within one region? (1 point)

Answer / scoring: Time, elevation, land cover, distance to water, and other factors differ.

3. Use W1 data. Which trial has the higher recorded value, and by how much? (2 points)

Answer / scoring: Trial B; 8 milliliters of water collected.

4. Use W1 data. State one observation without claiming its cause. (1 point)

Answer / scoring: Trial B recorded 19 versus 11 in A; accept an accurate description without an unsupported causal claim.

5. Use W1 data. Does this two-value table alone prove which factor caused the difference? Explain. (2 points)

Answer / scoring: No. Need a clear tested variable, controls, repeated trials, and consideration of other causes. One point for no; one for a relevant reason.

6. Compare short-term observations with long-term climate data. (3 points)

Answer / scoring: Rubric (3): scientifically accurate parts/ideas (1); correct relationships/reasoning (1); clear labels/evidence or method (1). Correct time scales, variables, and cautious inference.

Spanish - 7 points

Score: _____ / 7

Spanish model and vocabulary (cue support allowed)

Estudio por la mañana. Leo por la noche.
Word bank: estudiar, leer, comer, dormir, la mañana, la noche.

1. Translate into English: estudiar. (1 point)

Answer / scoring: to study

2. Translate into Spanish: to read. (1 point)

Answer / scoring: leer; accept appropriate article/gender variants when meaning is correct.

3. Translate to study into Spanish. (1 point)

Answer / scoring: estudiar

4. Oral task (teacher listens): Use 3 short statements or a 3-line exchange about this week/module topic. You may use the supplied vocabulary/model as a cue, but add your own relevant detail or question. (4 points)

Answer / scoring: Oral rubric (4): communicates topic meaning (1); uses relevant vocabulary (1); uses understandable phrases/sentences (1); responds to teacher or adds a relevant original detail/question (1). Sample cue: Estudio por la mañana. Leo por la noche. Accept different accurate answers and appropriate gender/person forms. Minor accent/pronunciation errors do not erase understood meaning.
