Two Sources for a Forecast

Fictional classroom sources: Source A, "Weather Log," by a student team, dated March 8, records local temperature, wind direction, and pressure at noon for five days. Source B, an unsigned advertisement dated March 8, says that one device "always predicts weather perfectly" but gives no measurements. A research group prefers Source A for describing what was actually observed. It still checks the team's instruments and method, because named authors and a date do not guarantee accuracy. The group writes a cautious forecast, separating data from inference. Its notes include each source's title, creator, date, and the particular information used. In its final explanation, it paraphrases the data instead of copying a paragraph and identifies its source. Readers can judge the explanation more easily because the evidence and its limits are visible.

1. A source makes a strong claim but provides no evidence. What should a researcher do? (1 point)

2. Why does an author's expertise matter? (1 point)

3. Why check a source's date? (1 point)

4. Compare a dated data log and an unsigned advertisement as evidence for a measurement claim. (2 points)

5. Why is Source A a better basis for this investigation than Source B? (1 point)

6. Why should researchers still check Source A's method? (1 point)

7. Correct this misspelling: enviroment. (1 point)

8. Write two organized paragraphs (at least 8 sentences total) explaining an important idea from the supplied passage. Paraphrase two relevant details and credit the supplied passage as your source. (5 points)

# Social Studies - 10 points
