Grade 7 - Module 5 Week 3 Quiz - TEACHER ANSWER KEY

Scheduled: 2027-03-12 | Current-week goals + math spiral review; science/social studies alternate

Math: 7.SP.1-4 | ELA: W.7.2,7-9; RI.7.1-9 | Science: E.7.9A.1-3 | Social Studies: MS CCRS SS Grade 7 - Byzantine/Islamic civilizations | Spanish: MS World Languages Framework 2016 - Novice communication

Award points by item. Accept equivalent correct mathematical forms and supported written interpretations. For open responses, use the stated rubric; do not require identical wording. Score each subject separately, then apply your grading policy.

Math - 9 points

Score: _____ / 9

1. Data A: [5, 7, 7, 9, 12]. Find the mean. (1 point)

Answer / scoring: 8.0

2. For Data A above, find the median. (1 point)

Answer / scoring: 7

3. For Data A above, find the range. (1 point)

Answer / scoring: 7

4. Data B: [6, 6, 7, 10, 11]. Find the median. (1 point)

Answer / scoring: 7

5. An outlier of 100 is added to 2, 3, 4, 5. Which changes more: mean or median? (1 point)

Answer / scoring: Mean. Mean goes from 3.5 to 22.8; median goes from 3.5 to 4.

6. Compare 2, 4, 6 and 4, 4, 4. Find both means and explain their variability. (2 points)

Answer / scoring: Both means are 4. First range is 4; second range is 0. Equal center can hide different spread.

7. Spiral review: -7 + 15 = ? (1 point)

Answer / scoring: 8

8. Spiral review: Write 3/4 as a decimal. (1 point)

Answer / scoring: 0.75

ELA - 13 points

Score: _____ / 13

Two Sources for a Forecast

Fictional classroom sources: Source A, "Weather Log," by a student team, dated March 8, records local temperature, wind direction, and pressure at noon for five days. Source B, an unsigned advertisement dated March 8, says that one device "always predicts weather perfectly" but gives no measurements. A research group prefers Source A for describing what was actually observed. It still checks the team's instruments and method, because named authors and a date do not guarantee accuracy. The group writes a cautious forecast, separating data from inference. Its notes include each source's title, creator, date, and the particular information used. In its final explanation, it paraphrases the data instead of copying a paragraph and identifies its source. Readers can judge the explanation more easily because the evidence and its limits are visible.

1. Why use more than one source for a research explanation? (1 point)

Answer / scoring: To compare/corroborate information and obtain different relevant perspectives.

2. What should a source list help a reader do? (1 point)

Answer / scoring: Find, credit, and check the sources used.

3. Explain the difference between evidence and your interpretation. (1 point)

Answer / scoring: Evidence is the source/data detail; interpretation is the explanation drawn from it.

4. Write a short explanation using the passage and identify the passage as your source. (2 points)

Answer / scoring: Accurate explanation with evidence and clear credit to the supplied passage.

5. Why is Source A a better basis for this investigation than Source B? (1 point)

Answer / scoring: A supplies dated measurements and a traceable method; B makes an unsupported absolute claim.

6. Why should researchers still check Source A's method? (1 point)

Answer / scoring: An author and date do not ensure that measurements or procedures are accurate.

7. Correct this misspelling: enviroment. (1 point)

Answer / scoring: environment

8. Write two organized paragraphs (at least 8 sentences total) explaining an important idea from the supplied passage. Paraphrase two relevant details and credit the supplied passage as your source. (5 points)

Answer / scoring: Rubric: clear relevant main idea/claim (1); two accurate supporting details (1 each); reasoning/organization (1); readable complete sentences and conventions (1). Accept defensible interpretations, not just the sample central idea: Credible research connects traceable evidence with cautious conclusions.

Science - 10 points

Score: _____ / 10

W3 data: A fictional class compares water collection in two labeled trials using the same time interval. Trial A: 13 milliliters of water collected; Trial B: 21 milliliters of water collected. These are invented assessment data, not a claim about a real investigation.

1. How does radar differ from a surface thermometer's information? (1 point)

Answer / scoring: Radar detects precipitation-related patterns over areas; a thermometer measures local temperature.

2. Why combine satellite, radar, and surface data? (1 point)

Answer / scoring: They provide different scales and variables, improving interpretation.

3. Use W3 data. Which trial has the higher recorded value, and by how much? (2 points)

Answer / scoring: Trial B; 8 milliliters of water collected.

4. Use W3 data. State one observation without claiming its cause. (1 point)

Answer / scoring: Trial B recorded 21 versus 13 in A; accept an accurate description without an unsupported causal claim.

5. Use W3 data. Does this two-value table alone prove which factor caused the difference? Explain. (2 points)

Answer / scoring: No. Need a clear tested variable, controls, repeated trials, and consideration of other causes. One point for no; one for a relevant reason.

6. Plan a weather-data comparison. (3 points)

Answer / scoring: Rubric (3): scientifically accurate parts/ideas (1); correct relationships/reasoning (1); clear labels/evidence or method (1). Identify each source/variable, align times/locations, and discuss limits.

Spanish - 7 points

Score: _____ / 7

Spanish model and vocabulary (cue support allowed)

Estudio por la mañana. Leo por la noche.
Word bank: estudiar, leer, comer, dormir, la mañana, la noche.

1. Translate into English: estudiar. (1 point)

Answer / scoring: to study

2. Translate into Spanish: to read. (1 point)

Answer / scoring: leer; accept appropriate article/gender variants when meaning is correct.

3. Translate to study into Spanish. (1 point)

Answer / scoring: estudiar

4. Oral task (teacher listens): Use 3 short statements or a 3-line exchange about this week/module topic. You may use the supplied vocabulary/model as a cue, but add your own relevant detail or question. (4 points)

Answer / scoring: Oral rubric (4): communicates topic meaning (1); uses relevant vocabulary (1); uses understandable phrases/sentences (1); responds to teacher or adds a relevant original detail/question (1). Sample cue: Estudio por la mañana. Leo por la noche. Accept different accurate answers and appropriate gender/person forms. Minor accent/pronunciation errors do not erase understood meaning.
