Grade 7 - Module 5 Week 3 Quiz

Scheduled: 2027-03-12 | Current-week goals + math spiral review; science/social studies alternate

Student: _____ Date completed: _____

Math: 7.SP.1-4 | ELA: W.7.2,7-9; RI.7.1-9 | Science: E.7.9A.1-3 | Social Studies: MS CCRS SS Grade 7 - Byzantine/Islamic civilizations | Spanish: MS World Languages Framework 2016 - Novice communication

Student paper contains no answers. Complete all sections. Show math work. Use only the supplied passages/background notes and teacher-approved tools. Spanish cue support is allowed. A module test may be divided into 2-3 sittings.

Math - 9 points

Score: _____ / 9

1. Data A: [5, 7, 7, 9, 12]. Find the mean. (1 point)

2. For Data A above, find the median. (1 point)

3. For Data A above, find the range. (1 point)

4. Data B: [6, 6, 7, 10, 11]. Find the median. (1 point)

5. An outlier of 100 is added to 2, 3, 4, 5. Which changes more: mean or median? (1 point)

6. Compare 2, 4, 6 and 4, 4, 4. Find both means and explain their variability. (2 points)

7. Spiral review: -7 + 15 = ? (1 point)

8. Spiral review: Write 3/4 as a decimal. (1 point)

ELA - 13 points

Score: _____ / 13

Two Sources for a Forecast

Fictional classroom sources: Source A, "Weather Log," by a student team, dated March 8, records local temperature, wind direction, and pressure at noon for five days. Source B, an unsigned advertisement dated March 8, says that one device "always predicts weather perfectly" but gives no measurements. A research group prefers Source A for describing what was actually observed. It still checks the team's instruments and method, because named authors and a date do not guarantee accuracy. The group writes a cautious forecast, separating data from inference. Its notes include each source's title, creator, date, and the particular information used. In its final explanation, it paraphrases the data instead of copying a paragraph and identifies its source. Readers can judge the explanation more easily because the evidence and its limits are visible.

1. Why use more than one source for a research explanation? (1 point)

2. What should a source list help a reader do? (1 point)

3. Explain the difference between evidence and your interpretation. (1 point)

4. Write a short explanation using the passage and identify the passage as your source. (2 points)

5. Why is Source A a better basis for this investigation than Source B? (1 point)

6. Why should researchers still check Source A's method? (1 point)

7. Correct this misspelling: enviroment. (1 point)

8. Write two organized paragraphs (at least 8 sentences total) explaining an important idea from the supplied passage. Paraphrase two relevant details and credit the supplied passage as your source. (5 points)

Science - 10 points

Score: _____ / 10

W3 data: A fictional class compares water collection in two labeled trials using the same time interval. Trial A: 13 milliliters of water collected; Trial B: 21 milliliters of water collected. These are invented assessment data, not a claim about a real investigation.

1. How does radar differ from a surface thermometer's information? (1 point)

2. Why combine satellite, radar, and surface data? (1 point)

3. Use W3 data. Which trial has the higher recorded value, and by how much? (2 points)

4. Use W3 data. State one observation without claiming its cause. (1 point)

5. Use W3 data. Does this two-value table alone prove which factor caused the difference? Explain. (2 points)

6. Plan a weather-data comparison. (3 points)

Spanish - 7 points

Score: _____ / 7

Spanish model and vocabulary (cue support allowed)

Estudio por la mañana. Leo por la noche.
Word bank: estudiar, leer, comer, dormir, la mañana, la noche.

1. Translate into English: estudiar. (1 point)

2. Translate into Spanish: to read. (1 point)

3. Translate to study into Spanish. (1 point)

4. Oral task (teacher listens): Use 3 short statements or a 3-line exchange about this week/module topic. You may use the supplied vocabulary/model as a cue, but add your own relevant detail or question. (4 points)
