Grade 4 · Module 6 Comprehensive gap assessment

Scheduled: 2027-04-23 | Required writing, hands-on/science, social studies, and Spanish gap work. Complete the separately listed Khan assessments for primary-course coverage.

Student: _____ Date completed: _____

Math: 4.NF.5-7; 4.MD.2 | ELA: RL.4.1-10; RI.4.1-10; W.4.1-9; L.4.1-6; SL.4.1-6 (grade-level coverage; module skill targets below) | Science: E.4.9A-B | Social Studies: MS CCRS SS Grade 4 - regions/geography/economics | Spanish: MS World Languages Framework 2016 - Novice communication

Student paper contains no answers. Complete all sections. Show math work. Use only the supplied passages/background notes and teacher-approved tools. Spanish cue support is allowed. A module test may be divided into 2-3 sittings.

Writing and conventions · required gap check - 12 points

Score: _____ / 12

A Case for Shade

Our reading area should have a shaded bench. At noon, the sunny bench can be uncomfortable. A shaded seat would give readers another choice. We can first move a portable shade nearby and record how many students use the area. Then we can ask whether the change helped. Some people worry that a permanent structure would cost too much. That is a fair concern, so a temporary test is a sensible first step. The goal is not to promise that every reader will love the bench. The goal is to use evidence to decide whether a small improvement is worthwhile.

1. Using the supplied passage, write one organized paragraph explaining its central message. Include two accurate details and explain how they support your response. (5 points)

2. Revise two sentences from your response. Explain one change that improves grammar, word choice, or clarity. (3 points)

3. Connect your writing to this module's Khan reading/grammar goals. Name two skills, show an example of each in your own writing, and explain your choices. (4 points)

Science - 28 points

Score: _____ / 28

W1 data: A fictional class compares water collection in two labeled trials using the same time interval. Trial A: 11 milliliters of water collected; Trial B: 19 milliliters of water collected. These are invented assessment data, not a claim about a real investigation.

W2 data: A fictional class compares water collection in two labeled trials using the same time interval. Trial A: 12 milliliters of water collected; Trial B: 20 milliliters of water collected. These are invented assessment data, not a claim about a real investigation.

W3 data: A fictional class compares water collection in two labeled trials using the same time interval. Trial A: 13 milliliters of water collected; Trial B: 21 milliliters of water collected. These are invented assessment data, not a claim about a real investigation.

W4 data: A fictional class compares water collection in two labeled trials using the same time interval. Trial A: 14 milliliters of water collected; Trial B: 22 milliliters of water collected. These are invented assessment data, not a claim about a real investigation.

1. How are evaporation and condensation different? (1 point)

2. Use W1 data. Which trial has the higher recorded value, and by how much? (2 points)

3. Draw a water-cycle model. (3 points)

4. Why record weather at consistent times? (1 point)

5. Use W2 data. Which trial has the higher recorded value, and by how much? (2 points)

6. Design a five-day weather log. (3 points)

7. What does a thermometer measure? (1 point)

8. Use W3 data. Which trial has the higher recorded value, and by how much? (2 points)

9. Draw a simple weather instrument and explain its use. (3 points)

10. What data might help a weather forecast? (1 point)

11. Use W4 data. Which trial has the higher recorded value, and by how much? (2 points)

12. Write a cautious forecast from a pattern in a weather log. (3 points)

13. Choose one of the supplied data comparisons. Write a claim supported by those data, give the two values as evidence, and explain what further information would be needed for a causal explanation. (4 points)

Social Studies - 24 points

Score: _____ / 24

W1 background: Coasts/rivers supported travel, trade, settlement, and industry. Human decisions and changes over time also shape communities. This is an assessment background note written for this packet, not an actual historical primary-source quotation.

W2 background: Flat land and suitable soils can support large fields, subject to climate/resources. Regions include physical, cultural, and economic variation. This is an assessment background note written for this packet, not an actual historical primary-source quotation.

W3 background: It supports a fair, clear geographic comparison. Water, food, transport, housing, work, or public services. This is an assessment background note written for this packet, not an actual historical primary-source quotation.

W4 background: People carry skills, ideas, relationships, and cultural practices as they move. Jobs, family, safety, education, and many other circumstances vary. This is an assessment background note written for this packet, not an actual historical primary-source quotation.

1. What is one way water has influenced the Northeast's development? (1 point)

2. Why should a region's history be considered along with its geography? (1 point)

3. Compare two Northeast states using a labeled map or table. (3 points)

4. How can broad plains support some types of farming? (1 point)

5. Why is the Midwest more than one kind of land or community? (1 point)

6. Compare a farm area and an urban area in the Midwest. (3 points)

7. Why compare Northeast and Midwest using common categories? (1 point)

8. What is one shared need of communities in both regions? (1 point)

9. Construct a region-comparison chart. (3 points)

10. How can migration connect regions? (1 point)

11. Why can people move for different reasons? (1 point)

12. Model one movement between regions. (3 points)

13. Choose one background note. Describe an additional perspective or source that could improve it, and explain what it might reveal or challenge. (4 points)
